DeepSeas MDR for Endpoint

Protect devices in real-time.

Managed Detection & Response (MDR) for endpoint from DeepSeas protects your organization's devices in real-time from malware, ransomware, and other advanced cyber threats. Utilizing 24x7 monitoring, analysis, and response, along with other advanced defensive technologies, DeepSeas will secure your endpoints – ensuring you maintain operational integrity with minimal disruption.

✕ Issues You're Facing	What DeepSeas Brings	☑ Outcomes Delivered
Uncertainty around your cyber readiness	• Persistent threat defense • Access to security experts	Greater confidence in endpoint security posture
Concerns about organizational impact of cyber threats	• Enhanced visibility & controls • Guided threat remediation	Lower organizational risk from cyber threats
Questions about effectiveness of cyber technology	• Proper tool configuration & orchestration • Intel-driven threat detection	Fully orchestrated and optimized cybersecurity technology
Inability to demonstrate value and ROI of cybersecurity tools	• Clear and measurable KPIs • Customizable reports	Improved ROI of cyber stack with Board-relevant metrics

What You Can Expect from DeepSeas MDR for Endpoint

Specialized Threat Detection

DeepSeas specializes in detecting and responding to threats specifically targeting endpoint devices to quickly identify and neutralize threats, ensuring device and data security.

Optimized Technology Investment

You won't have to "rip and replace," because DeepSeas can leverage and help you properly configure and orchestrate the security tools you already have in place.

Detailed Threat Notification

The DeepSeas crew will provide detailed reports on validated threats, including nature, context, severity, and remediation steps, crafted by our expert cyber defense analysts.

Expert Threat Response

DeepSeas will provide your team with expert guidance and actions for threat resolution, all detailed in a jointly approved MDR runbook.

Post-incident Analysis & Remediation

Following a security incident, the DeepSeas crew will conduct a thorough investigation to understand the root cause. Remediation strategies are then implemented to prevent recurrence.

Curated Threat Intelligence

DeepSeas will enhance your threat detection and response effectiveness through tailored detection logic and analytics in your network.

Get a Single Virtual Command Center

DeepSeas VISION, our proprietary security operations platform, unites your entire security program and provides a single virtual command center to manage strategic security planning, ongoing attack surface and vulnerability management, and 24x7 defense from cyber threats. Only clients of DeepSeas have access to DeepSeas VISION, which increases visibility, maximizes utilization of security tools, and gives immediate uplift to detection and response capabilities while covering all attack surfaces, including Operational Technology (OT).
