If your EDR vendor is also providing MDR, you're covered...Right?

Ask these 3 questions about your EDR's MDR option.

Is the MDR (Managed Detection & Response) option from your EDR (Endpoint Detection and Response) tool collecting threat intel from all supported endpoint technologies and building detections based on that holistic intel?

If you are getting MDR from an EDR vendor, you're likely only gaining intel from its limited ecosystem. DeepSeas MDR+ will give you a deeper set of detections- because we look at a broader set of telemetry.

Is your EDR vendor, at its core, a software company positioning MDR services as simplistic SaaS offerings?

Highly ranked MDR solutions, like DeepSeas, are dedicated service providers focused on delivering programs and outcomes. Whereas EDR vendors are software companies that prioritize repeatability and conformity. DeepSeas works collaboratively with you to drive quick and meaningful results.

Does your EDR vendor offer adjacent services (GRC, pen testing, CISO, etc.) to help you transform your cybersecurity program?

DeepSeas has a crew of battle-hardened cyber experts offering CISO Advisory and offensive security services. EDR vendors will have to outsource these critical components, creating multiple silos and unnecessary complexity within your cyber program.
