Bitnami Secure Images

Enterprise-Ready Open Source. Security Without Compromise.

Introducing Bitnami Secure Images

For over 18 years, Bitnami by VMware Tanzu has shaped how modern enterprises consume open-source software. Trusted by millions of developers — with over **500 million monthly Docker pulls** — Bitnami has been the go-to source for OSS images.

With **Bitnami Secure Images**, you get the same trusted software, rebuilt for enterprise security: production-ready, continuously updated and hardened to minimize CVEs with 24/7 support, image customization and industry-standard security artifacts.

Why upgrade?

- **Stronger security** – Drastically reduced CVE count, with continuous rebuilds in a SLSA-3 secure software factory.
- **Faster response** – Vulnerability triage made easier with VEX statements, KEV and EPSS scores.
- **Enterprise-ready packaging** – Advanced Helm charts (including exclusive distroless charts up to 83% smaller and 50% fewer packages).
- **Private & reliable delivery** – Images and charts delivered through a dedicated, secure registry instead of public registries with rate limits.
- **Customizable & supported** – Tailored builds plus enterprise support for packaging and installation issues.
- **Proven outcomes** – Industry-standard supply chain security at a fraction of the cost of peers, trusted by hyperscalers and government agencies.

Features & benefits

- **280+ applications & 2,000 containers:** All delivered as hardened, minimal-CVE images.
- **Rapid vulnerability triage:** VEX statements for quick decision-making.
- **Low attack surface OS:** Photon OS base, FIPS and STIG compliant, easy to extend.
- **Full transparency:** SBOMs, SLSA-3 attestation, anti-virus scans, API-ready reports.
- **Best-in-class helm charts:** 110+ distroless application charts, 83% smaller, 50% fewer packages.
- **Customizable images:** Build to your organization's unique needs.
